

Sooogood Media Catch

macOS · local-first media toolkit

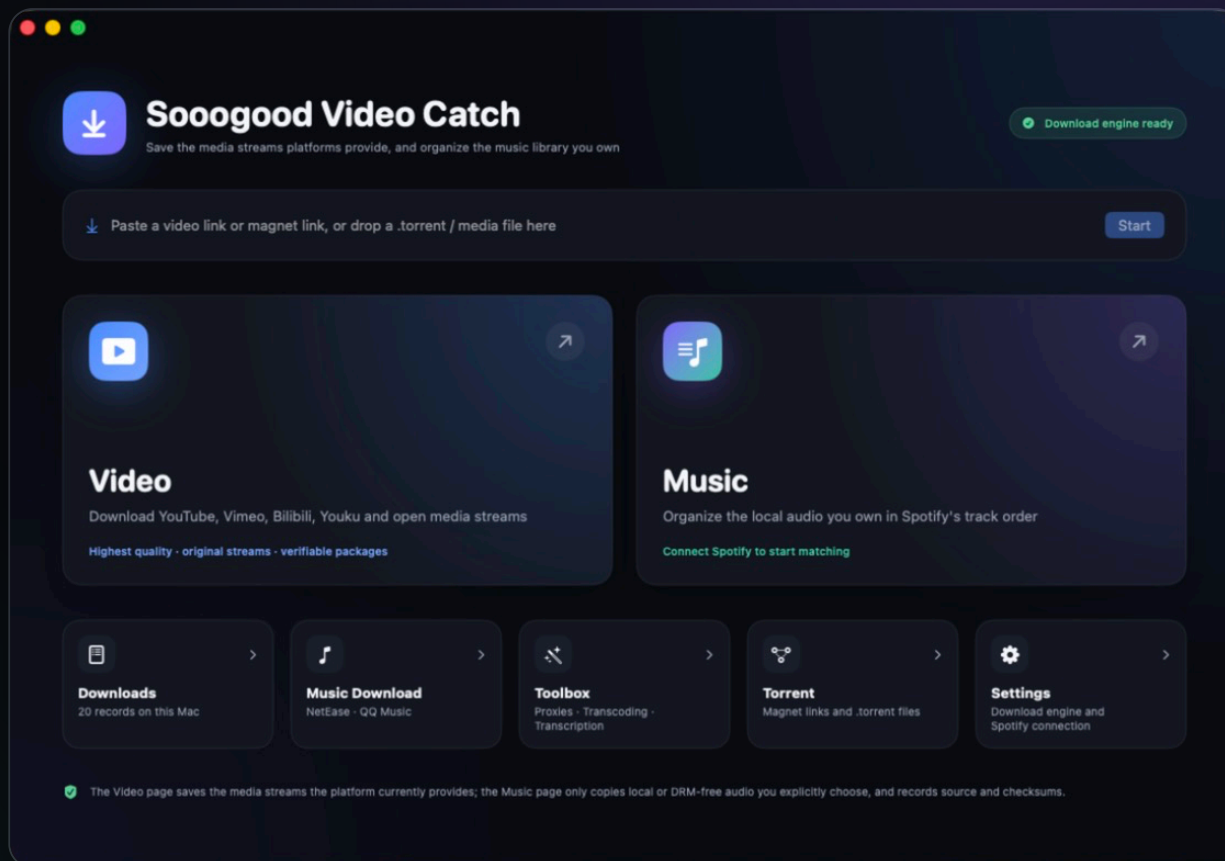

Save what you're allowed to keep — in the best quality, with proof.

A local-first macOS app for creators: video, music, courses and torrents, delivered as verifiable packages and ready for DaVinci Resolve.

Original quality

SHA-256 manifests

Ready for Resolve

≈1,700

sites via yt-dlp

SHA-256

for every file

0

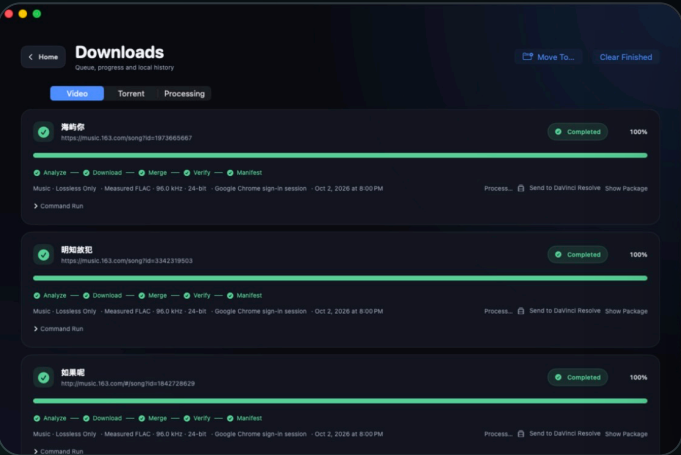

telemetry or ads

Everything in one place

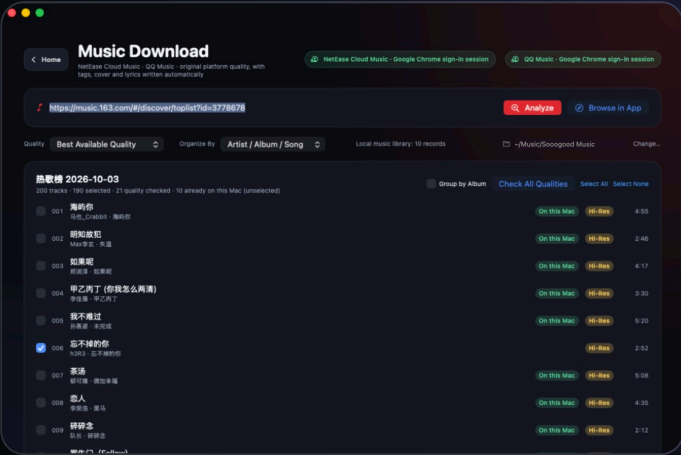

Video, inspected first

Every stream with resolution, codec, bitrate and size before you download.

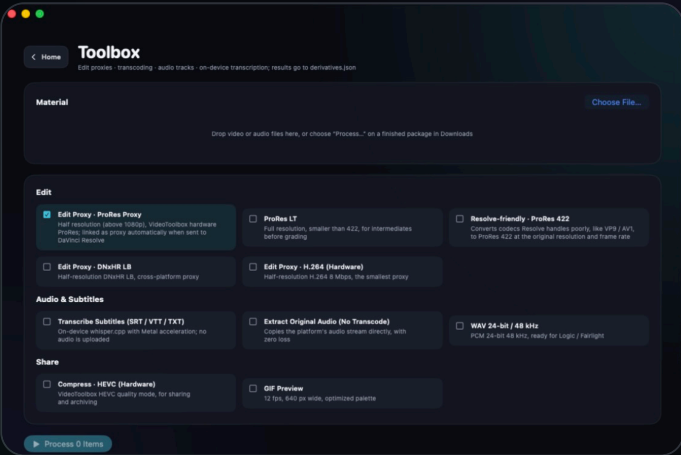

A queue you can audit

Analyze → download → merge → verify → manifest, with the exact command kept.

Music in original quality

NetEase Cloud Music & QQ Music: tags, cover, lyrics, measured quality, duplicates skipped.

A toolbox for editors

ProRes / DNxHR proxies, HEVC, WAV, GIF and on-device transcription.

DaVinci Resolve

One click into the media pool, with source and checksums as clip metadata.

AI agents (MCP)

Claude Code, Hermes and others can analyze, queue and send — never delete.

Courses & playlists

Expanded by chapter; DRM lessons skipped.

Torrents

Private local Transmission engine, file selection, seeding limits.

Move to...

Across disks with verification before the original is removed.

Six languages

English · Français · Deutsch · 日本語 · 한국어 · 中文

Requirements

macOS 14 or later · yt-dlp, FFmpeg and deno via Homebrew

Responsible use

No DRM circumvention. Download only content you own, are licensed for, or that the platform allows you to save.
